RACKWISE Previews Advanced Data Center Management and Intelligence Software

San Francisco, CA. - October 5th, 2009 – Visual Network Design Inc. (dba Rackwise), the internationally recognized leader in data center management solutions, today announced that it will preview advanced data center management and intelligence software in the AFCOM conference at the Orlando World Center Marriott, Orlando FL, October 5th and 6th, booth 508.

Advances to the industry leading Rackwise DCM software being previewed will demonstrate how the correlation of data center information and the application of business intelligence principles to the data center; enables informed decisions for managers and executives. Reporting and modeling features designed to further visibility into the complex relationships of data center infrastructure, as they relate to business services and costs, will be highlighted.

“Keeping up with business demands, planning and using capacity in a cost effective manner, achieving the Green Data Center, and simply doing more with less is what RACKWISE v3.5 data center management and intelligence is designed to accomplish” said Dom Lesme, VP & General Manager at Rackwise.

Rackwise will show how to proactively plan for and enable the efficient operation of the data center by optimizing, improving performance, enabling integrated change management, use of real-time information, advanced cabling, and cost savings analysis.

About RACKWISE:

Founded in 2003, RACKWISE develops innovative software technology for the data center. The RACKWISE product family is broadly used by Global 2000 enterprises, service providers, and SMB's to intelligently plan and manage their IT physical infrastructure.
